THE CHURCH OF **JESUS CHRIST** OF LATTER-DAY SAINTS | Meetinghouse Technology

TO: Technology Specialists

FROM: Meetinghouse Technology Team

Meetinghouse Firewall

Internet access provided by the Church in meetinghouses must always include an approved meetinghouse firewall: a Cisco 881W, ASA 5505, or PIX 501. Stake and district technology specialists are responsible for making sure the firewall is in place, that it's configured correctly, and that it does not get bypassed.

Please check to make sure an approved firewall is installed and configured properly in each of your meetinghouses with Internet access. It is recommended that firewalls be checked at least quarterly...View More

Sophos Update

Sophos, is the official meetinghouse computer anti-virus/firewall software, approved for Church-owned computers. If you have or are using other anti-virus or firewall software please remove them and install Sophos.

We have found some instances where Sophos has been disabled, removed or other anti-virus software is being used. We need your help to make sure that only Sophos is installed on Church owned computers. In addition, some computers are not being left on long enough to get all of the required updates and security patches...View More

Meetinghouse Technology Site

We are preparing to move meetinghouse technology content from the LDSTech Wiki to a new Clerk training site being developed on LDS.org.

Our online article offers an in-depth look into project objectives, current status, and a screen shot of the latest landing page...View More

Meetinghouse Technology Survey

Please take an 8 question survey with your feedback on Sophos and Meetinghouse Firewall. We will be conducting similar surveys often to help us provide the solutions you need.
